

ABSTRACT OF THE DISCLOSURE

A recession is provided on the outer side of
a data area of a disc, and this recession is provided
so as to extend over a front side or a reverse side
5 of the disc and a disc outer periphery end surface.
By arranging one or more recessions on the front side
or the reverse side, the front and reverse sides
(side A/side B) of the disc or a type of the disc can
be recognized.
